A Corrigendum on

A comparison of two sleep spindle detection methods based on all night averages: individually adjusted vs. fixed frequencies

The description of the Individual Adjustment Method (IAM) algorithm for sleep spindle analyses (Ujma et al., 2015) contained an error, which we hereby rectify. On page 5, line 7–8, instead of $f(x) = e^{\wedge\left(\frac{-((x-xm)/(w/2))}{2}\right)}$, the equation should read as follows:

$f(x) = e^{\wedge\left(-((x-xm)/(w/2))^{\wedge\wedge}2\right)}$
